

### IT'S EASY!

Measuring for your cabinets is as easy as 1, 2, 3! Please call us if you have any questions along the way.

## 1 Step 1: Your Room Shape

Sketch out the shape of your room. Use a ruler and pencil to help guide you along the way. Focus mainly on walls you feel will have cabinets on them & be sure to include windows, doors, and appliance locations. If there are any obstacles that affect where your cabinets can be installed make a note. \*See sample room shapes and sample room drawing to the right.

### Examples of room shapes:

## 2 Step 2: Measure & Mark

Once you have your walls drawn & all openings/windows marked it time to measure. Use letters as labels for each aspect and write th measurements over to the side. Be sure you measure the entire wall, not just where you estimate the cabinets will stop. This will help us know if there is any "wiggle room" if we need an extra inch or two for your design. Measure from outside edge to outside edge and fill in the key as you go. If you're uncomfortable with precise measurements feel free to round to the nearest inch. Remember this is just to get started, your designer will schedule a final measurement after you sign your contract to confirm details.

## 3 Step 3: Take Pictures

If you're able, take photos to send or bring to the designer. That will help answer any questions that might arise during design.
